

BESMA KADDOUR

Full Stack Software Engineer · AI-Assisted Software Engineer

Web & Mobile Applications · Financial Technology / Trading Systems

Contact: WhatsApp · Email · [LinkedIn](#) · [GitHub](#)

Professional Summary

Practical Full Stack Software Engineer building web applications, mobile applications, backend systems, dashboards, digital platforms, AI-powered applications, automation systems, and financial-technology software. Works across requirements and architecture, UI/UX implementation, frontend and backend development, database design, REST APIs, authentication, third-party integrations, testing, debugging, deployment, production maintenance, and performance optimization.

Uses AI-assisted software engineering throughout the development lifecycle to analyze codebases, generate and review code, debug, refactor, test, document, investigate technical issues, and accelerate implementation. The workflow remains engineering-led: AI assistance, review, implementation, testing, debugging, validation, and production integration.

Core Engineering Expertise

- Full-stack, frontend, and backend architecture
- Responsive web applications, dashboards, APIs, and digital platforms
- Mobile and cross-platform development
- Database architecture, data modeling, query optimization, and API integration
- Authentication and security-conscious development
- Cloud deployment, environment configuration, and production maintenance
- Automated testing, integration testing, regression testing, and build validation
- Systematic debugging across network, authentication, database, mobile, and production environments
- Code refactoring, version control, software maintenance, and performance optimization

AI & AI-Assisted Software Engineering

Practical experience using AI as an engineering tool for architecture analysis, code generation, codebase understanding, debugging, refactoring, code review, testing, documentation, problem solving, development automation, multi-file changes, and technical investigation.

Tools and working patterns: Claude Code, OpenCode, AI coding agents, engineering review, validation, and production integration. AI is used to accelerate engineering work, not as a substitute for technical judgment.

Financial Technology & Market Analysis

Software engineering experience related to financial market analysis and automated trading systems. Areas include Forex, gold / XAUUSD, silver, major market indices, cryptocurrencies, DXY, US Treasury yields, global market conditions, market-data processing, technical analysis, price action, market structure, sessions, volatility, liquidity, economic news, macroeconomic conditions, external market data, and multi-factor signal analysis.

Trading-system components include automated trading engines, decision engines, execution engines, pending-order engines, entry gates, risk management, Auto Lot, dynamic Stop Loss / Take Profit, smart SL/TP logic, profit protection, drawdown protection, capital protection, exposure monitoring, margin monitoring, position management, news filtering, and market-session analysis.

This profile describes software engineering for financial systems. It does not present financial advice, guaranteed returns, or unsupported trading performance claims.

Trading-System Architecture

Market Data → Market Analysis → Technical / Fundamental / Macro Signals → Decision Engine → Risk Management → Entry Validation → Order Execution → Position Management → Profit Protection → Monitoring

Professional Experience

Software Engineer / Digital Identity

2024 — Present · Six years of experience stated by the profile owner

A growing professional practice across full-stack software engineering, AI-assisted development, software architecture, digital products, mobile and web applications, financial technology, automation, and creative technology.

- Build and maintain web applications, mobile applications, backend systems, dashboards, APIs, and digital platforms.
- Work across requirements, architecture, implementation, integration, testing, debugging, deployment, and production maintenance.
- Develop AI-powered applications and practical AI-assisted engineering workflows.
- Design software for market analysis, automated trading, decision logic, execution, position management, and risk-management systems.
- Investigate existing codebases, implement complex changes across multiple files, refactor systems, and validate production behavior.

Selected Project Experience

The following project categories are supported by the supplied profile. Add verified project names, links, dates, and outcomes before publishing detailed case studies.

- Digital platforms — **[ADD VERIFIED PROJECT NAME / SCOPE]**
- Enterprise-style management systems — **[ADD VERIFIED PROJECT NAME / SCOPE]**
- Web and mobile applications — **[ADD VERIFIED PROJECT NAME / TECHNOLOGIES]**
- AI-powered applications and conversational interfaces — **[ADD VERIFIED PROJECT NAME / SCOPE]**
- Automated trading and financial market analysis systems — **[ADD VERIFIED PROJECT NAME / ARCHITECTURE]**
- Dashboards, analytics platforms, API-driven applications, and automation systems — **[ADD VERIFIED PROJECT DETAILS]**

Technical Skills

Programming Languages

TypeScript, JavaScript, Python, PHP, Kotlin, Java, HTML5, CSS3.

Frontend

React, Next.js, responsive interfaces, component architecture, dashboards, API integration, authentication, real-time interfaces, performance, and modern frontend architecture.

Backend

Node.js, Python, PHP, Laravel, REST APIs, authentication, database-driven applications, business logic, external API integrations, production APIs, and cloud services.

Mobile & Cross-Platform

Flutter, React Native, Android, Kotlin, Java, Capacitor, iOS integration, WebView-based architectures, native bridges, API connectivity, authentication, network handling, mobile UI, and production builds.

Databases

PostgreSQL, MySQL, MongoDB, Firebase, database architecture, data modeling, API/database integration, query optimization, and production data handling.

Cloud, DevOps & Tools

Git, GitHub, npm, Gradle, Android Studio, Xcode, Vercel, Render, terminal-based development workflows, environment configuration, production deployments, API deployment, and frontend/backend integration.

Platforms & Integrations

Telegram Mini Apps, WebView applications, native mobile integration, third-party APIs, authentication systems, real-time systems, and cloud services.

Testing, Debugging & Validation

Automated testing, API testing, integration testing, regression testing, production troubleshooting, build troubleshooting, network debugging, authentication debugging, database debugging, mobile debugging, deployment validation, systematic debugging, and verification before production integration.

Education
